

Greetings from the ICPSR Summer Program!

We are writing to announce training opportunities for researchers in history, demography, and population studies.

The ICPSR Summer Program offers over 80 distinct training courses for researchers across the behavioral, social, and medical sciences. Many of the topics in our courses on quantitative methods and statistics that are of special interest to researchers in history, demography, and population studies include:

- longitudinal data analysis
- multilevel models
- regression and linear models
- time series analysis
- panel data analysis
- introductions to R, Stata, SPSS, SAS, and LaTeX
- and many more!

Additionally, the following 3-5 day workshops may be of particular interest to you:

[Longitudinal Data Analysis, including Categorical Outcomes](#)

[Analyzing Developmental Trajectories](#) (Amherst, MA)

[Applied Multilevel Models for Longitudinal Data](#) (Boulder, CO)

[Applied Multilevel Models for Cross-Sectional Data](#) (Boulder, CO)

The 2013 ICPSR Summer Program will include **over 80 courses**. To view a full listing of course offerings please visit our website: [2013 Course Schedule](#).

In addition, in order to facilitate attendance in the 2013 Summer Program, we are offering two special discounts:

A **15% discount** on total registration fees when an individual registers for two or more short (i.e., two- to five-day) statistical or fee-charging substantive workshops. Please note that this offer does not apply to sponsored substantive workshops (in which participant fees are covered by the course sponsor).

A **15% discount** on registration fees for returning Summer Program participants. This discount applies to both four-week sessions and the two- to five-day fee-carrying workshops. The ICPSR Summer Program in Quantitative Methods of Social Research is recognized throughout the world as the leading resource for basic and advanced training in the methodologies and technologies of social science research. ICPSR serves a diverse multidisciplinary and international constituency. Its general instructional philosophy emphasizes the integration of methods of quantitative analysis within a broader context of **substantive social research**. The ICPSR Summer Program also creates a unique and supportive

social environment that facilitates professional networking and encourages the exchange of ideas about the theory and practice of social science research.

Lectures and workshops on a wide variety of topics in research design, quantitative reasoning, statistical methods, and data processing are presented in two four-week sessions. The first session runs from June 24, 2013 until July 19, 2013. The second session runs from July 22, 2013 until August 16, 2013. The 2013 ICPSR Summer Program will also offer a number of three- to five-day workshops on both statistical and substantive topics throughout the summer. Most of these shorter workshops take place in Ann Arbor, but there are several that will be held in other locations: Amherst, MA; Berkeley, CA; Bloomington, IN; Boulder, CO; Chapel Hill, NC; Montreal, Quebec, Canada; and New York, NY.

We hope to see you at the 2013 ICPSR Summer Program!
